9. **SCHOLARLY AND PROFESSIONAL ACTIVITIES**

(a) *Areas of special interest and accomplishments*

- Upper Extremity and Knee Surgery – tertiary Referral Base
- Associate Head – Department of Orthopaedics, UBC Site
- Head, Division of Upper Extremity Surgery, 2008.
- Head, Division of Arthroscopy, Reconstruction and Joint Preservation, 2008- present.
- Director, Undergraduate Education (1998-2003). Privileged to have accomplished the organization, implementation, and evaluation of the new MD Curriculum on behalf of the Department of Orthopaedics.
- Head Team Physician (1993-present)
 - B.C. Lions Professional Football – 1993-1995
 - Vancouver Grizzlies Professional Basketball Team – 1995-2000
 - Vancouver Canucks Professional Hockey Team – 2000-present
- Member of the University of British Columbia Research Ethics Board Attestation (REBA), 2015- 18

i. Education

I have been involved in hands-on training of medical students, residents, fellows, and allied health care personnel for my entire career at the University of British Columbia over the past 15 years. I have personally trained 5 orthopaedic surgeons at the Fellowship level, who were able to return to an academic teaching position. I classify this as being a teacher of aspiring teachers.

I was involved initially in development and implementation of the new MD Curriculum, which began in the mid-1990's and continued until 2003 when the first graduating class in the new MD Curriculum was successfully accomplished. I was proud to be co-author of a study illustrating the discrepancy between the education of medical students in the musculoskeletal system versus their exposure in the community. This clearly had an impact on the amount of orthopaedic time the University of British Columbia allocated to the musculoskeletal system.

I am involved in allied health care students enrolled in Masters Programs, and gleaned a great deal of insight into the scope of educational requirements at the University of British Columbia through that affiliation.

At the Resident level, I am one of the original upper extremity arthroscopic surgeons in the province of British Columbia, and as such, have been involved intimately in training Residents in new techniques regarding shoulder and elbow surgery.

Finally, I am deeply involved with education of students from other universities, both at the undergraduate and postgraduate levels who come to learn techniques from Vancouver and take them to their home universities and towns for implementation.

ii. Professional Contributions

My subspecialty interest has been shoulder, elbow and athletic injuries of the knee primarily. I have busy teaching clinical practise. I have been immersed in understanding the elbow specifically, and have contributed in development of an understanding of fractures, such as that of the coronoid process and how it relates to elbow stability. Our classification has worldwide recognition. The merging role of elbow arthroscopy, which was in its infancy in the 1990's, has become mainstream for orthopaedic surgeons. At this University we have developed safe arthroscopic portals about the lateral aspect of the elbow used worldwide in elbow arthroscopy. Elbow instability is now becoming more fully understood, due in part to the contributions that have been made by myself as well as the University of British Columbia, in addressing the role of physical examination for elbow instability, with published reports.

As a result of these contributions, I have been involved to moderate and invited to speak at conferences sponsored by the American Academy of Orthopaedic Surgeons and their subspecialty groups such as the Hand Society, American Shoulder and Elbow Society, and international groups. The presentations have been exciting for me professionally as they have allowed me to stay in touch with the world leaders in elbow and shoulder surgery.

In addition, I have become a reviewer of multiple peer review journals, which have been both educational and stimulating, plus it keeps me on the edge of current literature.

iii. Impact of Outcomes Research

Since I became Associate Head of the Department of Orthopaedics and Head of the Division of Upper Extremity Surgery in 2002, we have developed a database at the University of British Columbia, which is yielding some preliminary population data that can be used to more fully develop outcomes research. In addition to the work submitted, additional projects such as revision arthroscopic Bankart repair and results of Weber osteotomy for shoulder instability prospectively are projects that are now possible, and are being evaluated by current Fellows as a result of this database. I fully expect that results of these studies will change the patterns of practice for upper extremity surgeons.

Published papers, such as that on arthroscopic debridement of the elbow for arthrofibrosis, are ground breaking and will change the pattern of practice for upper extremity surgeons.

Similarly, the article by Orfaly, McConkey and Regan demonstrating that lateral meniscal tears will heal following ACL reconstruction are also changing the pattern of practice of lower extremity surgeons.

This article, researched and published when I was Director of Undergraduate Education is the first to quantify the discrepancy between medical practitioner's exposure to Orthopaedics in the community,

compared to medical school preparation. It is responsible, in part, for the recent emphasis of musculo-skeletal teaching in Canadian medical schools.

Role: Dr. Pinney and I formulated methodology from the beginning, co-wrote the article, and revised the work prior to publication.

This basic science study clearly demonstrates an excellent blood supply, messenger RNA and collagen synthesis at the edge of a rotator cuff tears, which will allow a normal healing potential. This has enhanced arthroscopic rotator cuff repairs as the new "gold standard".
Role: This was my idea. The specimens came from rotator cuff surgery that I performed. After data collection, I was instrumental in focusing the data into meaningful conclusions and helped with the discussion and conclusions of the manuscript, plus revisions.

Role: This was my original idea. These cases were all my surgical cases. I helped with methodology, data collection, interpretation, and manuscript writing. I co-authored revisions prior to acceptance.

This is the first study to describe active apprehension signs to clinch the illusive diagnosis of postero-lateral rotatory instability. They will become the standard signs for physical examination and diagnosis of this condition, currently being used by tertiary referral elbow surgeons worldwide.
Role: These signs were my clinical observations and all subjects were my patients. The description and validity of the signs were co-written. The manuscript was finalized by myself and so were the revisions prior to final acceptance.

Role: This study completed in Dr. Oxland's lab was a continuation of other work conceptualized by Dr. Oxland and myself, to study scapular kinematics. I contributed to methodology by placing the pins in the scapula of each volunteer used in the study. I was part of the Master's Thesis Advisory Group for Dr. Bourne.
